

DK Workbooks: Geography, Sixth Grade

★ How Maps Work

FACTS
Maps show where places are located. They explain where a place is in relation to other places. For example, a city map can help you locate a museum by showing that it is around the corner from a place you know, such as a library. City maps include street names and numbers.

Look at this map of Sacramento, California. Use the map to answer the questions below.

1. Which theater is closest to the pharmacy?
.....

2. What building is east of the Leland Stanford Mansion Park?
.....

3. To reach the bank from the library, which street can you take?
.....

4. What is the name of the garden close to the Community Center Theater?
.....

6
